

Idaho Criteria for Opening Up: June 10, 2020

GUIDELINES FOR OPENING UP - IDAHO SYNDROMIC CRITERIA

Downward trend or low numbers of COVID-19-like illness patient visits as tracked by Emergency Departments within a 14-day period.

METRIC: Downward trend over most recent reported 14-day period, OR less than 20 visits/day on average over same 14-day period

The number of ED visits for COVID-19-like illness during May 25 - June 7 trended downward.*

*ED visits from the timeframe May 25 - June 7 were used to ensure the most complete and accurate dataset is available for trendline interpretation.

Number of Emergency Department (ED) Visits for COVID-like Illness

AND

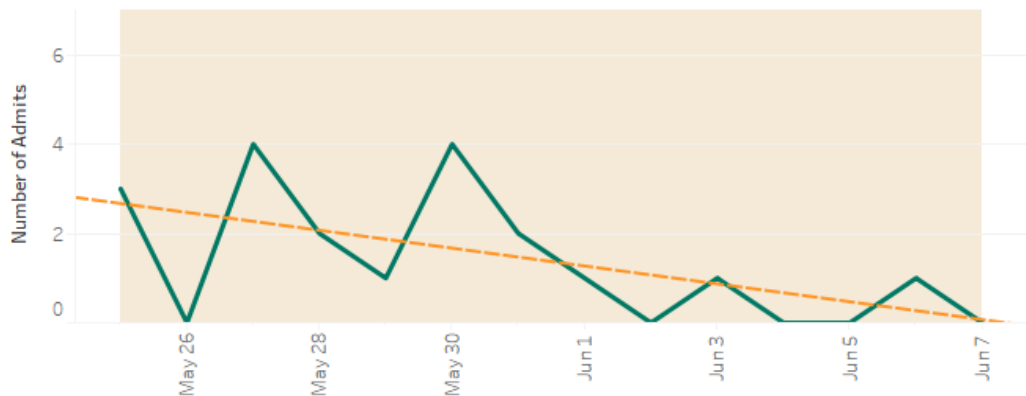

Downward trend or very low numbers of patients with COVID-19-like illness admitted from Emergency departments within a 14-day period.

METRIC: Downward trend over most recent reported 14-day period, OR less than 2 patients/day on average over same 14-day period

The number of ED patients with COVID-19-like illness admitted to the hospital during May 25 - June 7 trended downward.*

*ED visits resulting in admission from the timeframe May 25 - June 7 were used to ensure the most complete and accurate dataset is available for trendline interpretation.

Number of ED Patients with COVID-like Illness Admitted to the Hospital

Note: All data are provisional and subject to change. Metrics measured using the most recently available data for the specific metric resulting in the "most recent 14-day period" referenced vary by metric.

Updated: 6/10/2020

Downward trend or low levels of documented COVID-19 cases reported within a 14-day period. **METRIC:** Downward trend over most recent reported 14- day period, OR less than 20 patients per day on average reported statewide over the same 14-day period

The number of reported cases during May 27 - June 9 trended **downward**.

Number of Cases by Report Date

OR

Downward trend of positive COVID-19 PCR tests as a percent of total tests within a 14-day period (including flat or increasing volume of tests). **METRIC:** Downward trend over most recent reported 14-day period, OR less than 5 percent laboratory PCR positivity on average over same 14-day period

The percent of positive PCR tests during May 25 - June 7 trended **downward**.

Positive PCR Tests as a Percent of Total by Specimen Collection Date

Note: All data are provisional and subject to change. Metrics measured using the most recently available data for the specific metric resulting in the "most recent 14-day period" referenced vary by metric.

Treat all patients without needing to use crisis standards of care **MEASURED BY:** Governor's Order for Crisis Standards of Care in place; reports from hospitals.

All patients are being treated **without** needing to use crisis standards of care

AND

Available ventilators, intensive care unit beds, and personal protective equipment (PPE) to safely care for additional COVID-19 patients in hospitals. **METRIC:** At least 50 available (unused) ventilators, 50 ICU beds, and available 10-day supply of N95 masks, surgical masks, face shields, gowns, and gloves.

There were at least 50 ventilators and at least 50 available ICU beds available during May 27 - June 9.

Number of Available Ventilators and Intensive Care Unit (ICU) Beds

AND

There was at least a 10 day supply of PPE during May 27 - June 9.

Note: All data are provisional and subject to change. Metrics measured using the most recently available data for the specific metric updated in the "most recent 14-day period" referenced vary by metric.

AND

Robust COVID-19 testing program in place for at-risk healthcare workers. **METRIC:** Downward trend over most recent reported 14-day period, OR less than 2 healthcare workers reported/day on average over same 14-day period

The number of HCWs reported as having COVID-19 during May 27 - June 9 trended downward.

COVID-19 Among Healthcare Workers (HCWs) by Report Date**

**For entrance into Stage 1, 2, and 3, "illness onset" was used. For entrance into Stage 4, to better ensure high levels of data completion, "report date" was used. The trend interpretation when using "report date" for Stage 4 was not impacted by this change.

OR

Exactly 2 HCWs per day on average were reported as having COVID-19 during May 27 - June 9.
